*iOrder provides a **single portal** for all your facility's **electronic orders**. This not only brings about consistency and better communication regarding order requests and orders but iOrder can assist you with **meeting aspects of Stage 2 Meaningful Use**.*

You will find many aspects of iOrder that provide support for CMS's Clinical Quality Measures (CQMs) including health outcomes, clinical processes, patient safety, efficient use of healthcare resources, care coordination, patient engagements, population and public health, and clinical guidelines.

According to Centers for Medicare & Medicaid Services, "Measuring and reporting CQMs helps to ensure that our health care system is delivering effective, safe, efficient, patient-centered, equitable, and timely care."

iOrder assists with Stage 2 objectives for eligible professionals, hospitals, and critical access hospitals including:

- Use computerized provider order entry (CPOE) for medication, laboratory and radiology orders
- Record demographic information
- Use clinical decision support to improve performance on high-priority health conditions
- Incorporate clinical lab-test results into Certified EHR Technology
- Imaging results accessible through CEHRT

Call today to schedule a live demo and to learn how iOrder can help you qualify for Medicare and Medicaid EHR incentive payments.
