## Medical Order Assistance & Appropriateness

Hospital Revenue Cycle

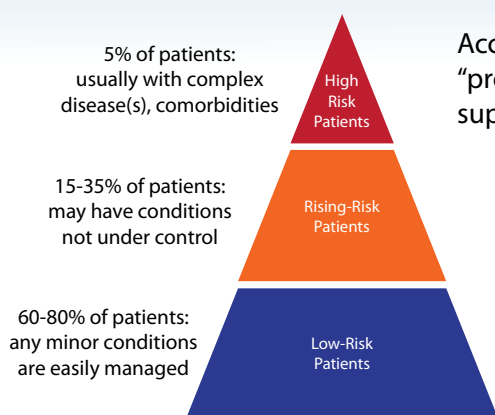

Population Health Management

Physician's Collaborative Workflow

Clinical Decision Support

CMS & Meaningful Use

Government policy and competitive business reality are driving a fundamental **change in healthcare** from volume-based methodologies **to outcome-based methodologies**. Population Health Management will be a reimbursement reality in the coming years.

According to a recent article in *Information Week* physicians and hospitals seek to “proactively manage patient health, coordinating care across providers, and supporting accountable-care models.”

### Future hospital income will involve:

- Better connectivity with the community
- Systems to analyze risk and manage workflow
- Driving down costs
- Increasing hospital revenue capture outside the brick and mortar building itself

As your outreach broadens in order to stay competitive and maximize total reimbursements this expansion will inevitably lead to **greater demand on your current method of scheduling** labs, radiology exams, physical therapy, etc. Scheduling **an increased volume of orders** while keeping everyone on the same page in a consistent and orderly fashion will become imperative.

### Organizations using iOrder are set to:

- Thrive within the changing healthcare marketplace
- Broaden revenue capture opportunities
- Maximize efficiency
- Improve quality care
